

Airbus Group re-appoints the CT engineering group as a preferred supplier for engineering services.

Getafe and Toulouse, May 27, 2016

- **Airbus Group has re-appointed CT as a preferred supplier for engineering services.**

The re-election of CT as a 'E2S' preferred supplier follows a successful track record of growth and internationalization ever since CT was first appointed E2S in 2008.

CT now works in all divisions of Airbus Group—Defense, Helicopters, and Space—providing support to most of its emblematic product engineering programs, and at most of its main sites. CT is also part of a select group of Research & Technology suppliers. Since 1998, CT has supported Airbus on its flagship aircraft programs, including work on A320, A380, A330mrtt, A350, and A400m.

Francisco Marin, CT's Key Account Manager for Airbus, said: "The re-selection of CT as an Airbus Group preferred supplier shows the success of our strategy to deliver quality engineering, on time and with a competitive offer to Airbus as a transnational and multi-skilled supplier".

About the CT engineering group:

International leader in Engineering with more than 1,300 professionals and present in aeronautic, naval, automotive, rail, architecture, construction, industrial plants, and renewable resources, covering the life cycle of products from Product Design and R+D, Production Engineering, and Support Engineering post-sales.
